DETAILED ACTION

Election/Restrictions

1. Claim 32 improperly depends from claim 30. Since claim 32 is a process claim, it will be assumed to be dependant of the process claim in claim 31.
2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1, 5, and 7 – 19, drawn to method 1, classified in class 427, subclass 212.
 - II. Claims 2, 5 – 17 and 19, drawn to method 2, classified in class 427, subclass 212.
 - III. Claims 3, 5 – 17, and 19, drawn to method 3, classified in class 427, subclass 212.
 - IV. Claims 4 – 13, drawn to method 4, classified in class 427, subclass 212.
 - V. Claims 20 – 22, drawn to method 5, classified in class 427, subclass 212.
 - VI. Claims 23 – 30, drawn to a product, classified in class 428, subclass 357.
 - VII. Claims 31 – 32, drawn to a method of capturing, classified in class 435, subclass 174.

The inventions are distinct, each from the other because of the following reasons:

3. Inventions I, II, III, IV and V are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation.

Art Unit: 1762

Each invention takes different steps to prepare or synthesize a metallic nanoparticle with a mixed monolayer.

4. Inventions I – V and VI are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product of invention VI can be made by any of the different methods of inventions I - V.

5. Inventions I – V and VII are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different functions. Inventions I – V are different methods for making nanoparticles whereas invention VII is a method of capturing.

6. Inventions VI and VII are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product can be used in a different process. The nanoparticles can be used to coat substrates.

Art Unit: 1762

7. Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

8. Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

Conclusion

9. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
